

## IMTECH N.V. PRESS RELEASE

### 90 MILLION EURO ORDERS FOR TECHNOLOGY IN EUROPEAN DATA CENTRES

Gouda, The Netherlands - Imtech N.V. (technical services provider in Europe) announces that it has received orders worth more than 90 million euro for total technological solutions for the overhaul, upgrading or expansion of data centres in Europe.

By combining innovative and multidisciplinary technology Imtech offers advanced solutions for technological infrastructure and upgrading of data centres. Due to the increased quantity of European data flow and the highly increased band width of data flow energy providers, banks, insurance companies, telecom providers, industrial and many other companies choose to invest in overhaul, expansion and upgrading of existing ICT infrastructure and capacity in large data centres.

Imtech provides high tech ICT infrastructure, reliable power supply, innovative cabling, preventative fire safety, no-break facilities and professional disaster plans. Because of the increased capacity of these centres, heat production is approaching critical limits of as much as 60,000 W/m<sup>2</sup>. In

order to process this enormous amount of heat, Imtech is able to find high tech solutions for extra cooling and warmth removal, for example by making use of innovative cooling technology and water circulation. All Imtech solutions are characterised by optimum attention to energy conservation and fit in seamlessly with the primary and secondary processes at these enormous data centres.

Recently Imtech received orders for the overhaul, upgrading or expansion of data centres of energy company EnBW (Energie Baden-Württemberg) in Krötzingen and Daxlanden in Germany, insurance company Allianz in München in Germany, data company e-shelter in Frankfurt in Germany, producer of optical instruments NDC in Eschborn and Oberursel in Germany, ING Bank in The Netherlands, telecom provider Belgacom in Belgium and the Drosbach financial data centre in Luxemburg. About fifty percent of these data centre has been equipped with IBM-technology. Imtech is also working on several 'stand alone' IBM-data centres in Germany and Ireland.

## IMTECH N.V. PRESS RELEASE

### 85 MILLION EURO ORDERS FOR TECHNOLOGY IN GERMAN FINANCIAL MARKET DATA CENTRES

Gouda/Hamburg - Imtech N.V. (technical services provider in Europe) announces that it has received orders worth more than 85 million euro for total technological solutions for the overhaul and/or expansion of computer and data centres of financial institutions in Germany.

The economic situation in Germany is picking up after a number of years of stagnation and negative economic conditions. Growth in exports first led to improvement in the investment climate in industry, and now the market for buildings is also clearly improving. Imtech Deutschland is one of the strongest players on the German market for technology in buildings. The combination of innovation and the use of multidisciplinary technical solutions leads to an advanced package of services. One of these services focuses on the technological infrastructure in computer and data centres.

The growing intensity of digital payment traffic and the

strongly increased bandwidth of information flows are prompting financial institutions and financial data centres to invest in overhauling and/or expanding their existing computing capacity and ICT infrastructure.

Imtech provides a reliable power supply, innovative cabling, preventative fire safety, no-break facilities and professional disaster plans. Because of the increased capacity of these centres, heat production is approaching critical limits of as much as 1,400 W/m<sup>2</sup>. In order to process this enormous amount of heat, Imtech is able to find high tech solutions for extra cooling and warmth removal, for example by making use of innovative cooling technology and water circulation. All Imtech solutions are characterised by optimum attention to energy conservation and fit in seamlessly with the primary and secondary processes at these enormous computer and data centres.
